

## POWDER UNIT FOR PT 25 AND PT COMBI

The powder unit makes it possible to blast with abrasive media like glass, sand, soda etc.

The operation is by means of injector / venturi principle (vacuum effect).

The unit can blast with dry ice pellets and abrasive media at the same time, or separate, for use on thin sheet metal to avoid heat and resulting in bending the metal.

You simply attach the unit to the gun and stick the injector lance directly into the bag of media.

### The unit consists of:

- Nozzle head including 1 nozzle (can be exchanged with other sizes).
- 600 mm lance with insulated handle.
- 4 m hose and injector lance.
- Coupling to blasting gun.

### Options:

- Vacuumhead for retrieving media and surface material (connect to a vacuum cleaner)
- Waterhead nozzle for minimizing dust,
